

ANDREW (ANDY) STEVENS

andystevens.dev • Atlanta, Georgia • (678) 951-2867 • andrewpstevens89@gmail.com

EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY, College of Engineering **Atlanta, Georgia**
Master of Science in Health Systems *May 2021*
Predictive Analytics Track, School of Industrial and Systems Engineering *GPA: 3.60*

GEORGIA INSTITUTE OF TECHNOLOGY, College of Engineering **Atlanta, Georgia**
Bachelor of Science in Biomedical Engineering *May 2020*
Minor in Industrial Design *GPA: 3.38*

EXPERIENCE

GEORGIA TECH RESEARCH INSTITUTE, Information and Communications Laboratory **Atlanta, Georgia**
Research Engineer II *July 2024–Present*
Interoperability Branch Head *February 2023–Present*
Research Engineer I *December 2021–June 2024*

- Continued responsibilities and tasks outlined in Affiliate Researcher position below
- Supported hiring activities by drafting job descriptions and responsibilities, reviewing resumes and additional content submitted by candidates, leading interviews, and participating in a student hiring manager working group as part of the GTRI People-First Strategy to improve student hiring processes and student employee retention
- Managed student and full-time employees in the branch by coordinating assignments and deliverables for all student employees, completing administrative duties such as assuring timesheet and training compliance, and providing professional development opportunities to promote positive learning and cultural environments
- Co-led multiple CDC-sponsored project by meeting with sponsors to give project work updates, owning staffing plans, tracking financials month by month, project planning for the project's period of performance for all full-time researchers and students working on the project, as well as coordinate any presentations to external organizations
- Collaborated with branch members and division leadership to define strategic division for the branch and how we can achieve this vision by utilizing current branch skill sets and planning to develop skills in emerging technologies, ensuring to align all work with national standards bodies and key influencers in the health technology space
- Some significant work completed during this position include back-end software engineering using FastAPI in Python and a variety of database solutions (including PostgreSQL and SQL Server), data standards mapping between local standards and national standards, and research around extraction of social determinants of health from clinical notes using large language models to structure these elements for inclusion into an EHR system
- Conferences presented at: HIMSS24, AMIA Annual Symposium 2023, CSTE23, AMIA Informatics Summit 2022
- Certifications achieved: HL7 FHIR R4 Proficiency Exam, Microsoft Azure Fundamentals, HL7 Certified FHIR Foundational Implementer

TEKSYSTEMS, Contracted to GTRI **Atlanta, Georgia**
Affiliate Researcher *June 2021–December 2021*

- As a full-time contractor in the HEAT Division at GTRI, I built upon my previous work as a student interoperability intern by increasing my level of responsibility on externally sponsored projects and deliverables for those sponsors, while also increasing my knowledge of FHIR by gaining the official HL7 FHIR Certification and hands-on experience in the standard
- Some significant tasks completed during this position include automated code generation using Python, mapping of codes from local systems to FHIR Resources, mapping of data elements to clinical codes and text terms for FHIR Resource retrieval and natural language processing, FHIR Implementation Guide development using FHIR ShortHand (FSH), used components and their APIs to create a functional end-to-end system, and used JIRA to track work and Confluence to document findings throughout all projects

STUDENT RESEARCHER

GTRI, ICL

Atlanta, Georgia

February 2021–May 2021

- Worked with a team of FHIR developers, data scientists, and software engineers to craft innovative solutions for problems within public health and to support clinical health systems and related research.
- Built data visualizations, models to track and analyze trends, data pipelines to process, clean, and harmonize data, and interactive web applications to explore and analyze data while working with health data to build clinical phenotypes

OPTOMECHANICS STUDENT RESEARCHER

GTRI, Electro-Optical Systems Laboratory (EOSL)

Atlanta, Georgia

May 2019–May 2020

- Tasked with the design, analysis, assembly, alignment, and testing of optical systems, including a system was recently named one of GTRI's major initiatives for fiscal year 2020
- Significant Projects include: an optical imaging system for space situational awareness initiatives, a sensor review for a degraded visual environment system, an underwater-mapping LiDAR system, as well as a summer internship project for the research of integrated modeling of optical systems, using Python to connect Zemax OpticStudio and SolidWorks to decrease time spent on optomechanical design and analysis

SKILLS

Technical:	FHIR, Health Terminology Standards (ICD9/10, SNOMED, LOINC, CPT, etc.), OMOP Database Schema, CQL, SQL, Python, Docker, Azure, SolidWorks, R, Tableau, Java, Adobe Creative Suite, Visio, TypeScript	Personal Skills:	Statement of Work (SoW) preparation, Management of Project Teams to Complete Deliverables on Time, Presentations, Team Collaboration, Problem-Solving, Organization
-------------------	--	-------------------------	---
